COMMERCIAL TRUCK CROPS FOR MARKET

Planting, Harvesting and Marketing Dates,
Important Areas of Production, and
Average Acreage, Yield and Production.

December 1940

These compilations, which show the planting, harvesting, and marketing dates, and the principal areas of production of commercial truck crops grown primarily for fresh consumption, have been prepared by the Agricultural Statistics Division for the use of its field offices. Copies are available, however, for distribution to other Governmental agencies and to individuals who make specific requests.

Definitions and Explanations

The data as presented relate only to those truck crops and areas of production covered by the official estimates of the Agricultural Marketing Service under the caption "Commercial Truck Crops for Shipment".

The "Group and State" is the grouping used by the Agricultural Marketing Service in preparing official estimates of acreage, yield, and production to show the seasonal sequence of supplies.

The "Usual Period" is intended to include the beginning and ending dates for most seasons, but may exclude exceptionally early or exceptionally late dates occurring in unusual seasons.

The "Planting" period shown covers the time crops usually are planted in the field. In the case of crops grown from seed without transplanting, it is the period in which the seed is planted. For transplanted crops, it is the transplanting period. "Seed" is used in a broad sense and includes tubers, bulbs, etc.

JAN 14 1941
The "Harvesting" period designated is the period when crops are picked, cut, pulled, dug, or otherwise harvested. For commodities temporarily stored in the field following harvest, the period does not include field storage. In the case of many crops, the harvesting period so nearly coincides with the marketing period that the two operations are shown as taking place simultaneously.

3
The "Marketing" period is assumed not to include pre-harvest sales and contracts, but to start with the movement of the commodity from growers' hands and to extend to cover the withdrawal from storage of those crops that usually are stored.

The "Active Marketing" period has been set up to show when the major part of the season's marketings occurs. It is in substance the entire "marketing" period less the usual periods of light marketings at the beginning and at the end of the crop season.

The "Principal Areas of Production" as given are intended to include all of the important areas, but do omit many minor producing sections. It is believed that sufficient territory is included so that anyone can take a map showing county outlines and locate the important producing areas for the various crops. For this reason, areas are mostly designated by counties. When a county, river valley, or a district adjacent to a town or city is designated as a producing area, it should not be assumed that the entire county or district grows the crop mentioned. It may be that production is restricted to only a part of the county or district named.
